

INTERIM CHANGES TO UCID-21218, REV. 2

1. Page 1-4: Last sentence, first paragraph (continued from p. 1-3). "... are provided ..." should be changed to "... is provided ..."
2. Page 2-6: Table 2.1, Containment, Category III. The applicable code should be Section VIII, Division 1, not Section III, Division 1, Subsection NF. The ** footnote is still applicable.
3. Page A-5: Definition of Radioactive contents. The correct definition should be "A Class 7 (radioactive) material together with any contaminated liquids or gases within the package." The reference to 49 CFR 173.403 is still applicable.
4. Page C-3: Table C.1. The following row should be added for clarity:

Part 71 1996	Part 71 1983	Change	Comments
71.31(c)	71.37(b)	Although wording has not changed, these sections require identification of established codes and standards. Packages with "-85" suffix should use currently accepted codes and standards.	Most likely issues appear to be ASME Boiler and Pressure Vessel Code (Section III v. Section VIII) and most recent version of ANSI N14.5.

5. Page A-5: Definition of Type B package. The third sentence [“B(U) refers ... international shipments”] should be replaced by the following two sentences: “B(U) refers to the need for unilateral approval of international shipments. B(M) refers to the need for multilateral approval of international shipments.”
